Folio Test Fixture

synthetic text pdf for the S1 engine spike

This document contains ten pages of real, selectable text: a cover, a heading hierarchy, body paragraphs, a dialogue page of short lines, an empty page, a page with text drawn at ninety degrees, and a short mixed page. It exists so the pdf.js engine spike can be measured, not admired.

Chapter One

Typography carries meaning. A heading announces; a paragraph explains; a short line interrupts. A reader that cannot tell these apart is only pretending to read. This fixture checks that the line index treats each of them correctly.

Section 1.1

Consider the line as the unit of attention. Page turns are coarse. Paragraphs are arbitrary. But the line is where the eye actually rests, and any ruler that wants to guide the eye must know where each line begins and ends.

Subsection 1.1.1

Headings nest. The line index should order them top to bottom, and the cluster step should never merge a heading into the paragraph beneath it when the vertical gap is clearly larger than the line height.

Body page 3

Every book is a machine for slow thinking, and the reader is the operator. The Folio test fixture exists to make sure the operator can find every line of text, on every page, no matter how the page was composed.

Typography carries meaning. A heading announces; a paragraph explains; a short line interrupts. A reader that cannot tell these apart is only pretending to read. This fixture checks that the line index treats each of them correctly.

Every book is a machine for slow thinking, and the reader is the operator. The Folio test fixture exists to make sure the operator can find every line of text, on every page, no matter how the page was composed.

Body page 4

Consider the line as the unit of attention. Page turns are coarse. Paragraphs are arbitrary. But the line is where the eye actually rests, and any ruler that wants to guide the eye must know where each line begins and ends.

The empty page is not a mistake. Real books contain blank leaves before chapters, after dedications, and at the end of signatures. The engine must not crash on them, must not invent lines, and must tell the ruler there is nothing to stand on.

Typography carries meaning. A heading announces; a paragraph explains; a short line interrupts. A reader that cannot tell these apart is only pretending to read. This fixture checks that the line index treats each of them correctly.

Body page 5

Rotation is the quiet trap of PDF text. Glyphs are placed with a transform, and the visible position is the transform multiplied by the page viewport. A line drawn at ninety degrees is still a line; the extractor must find it sideways.

Every book is a machine for slow thinking, and the reader is the operator. The Folio test fixture exists to make sure the operator can find every line of text, on every page, no matter how the page was composed.

Consider the line as the unit of attention. Page turns are coarse. Paragraphs are arbitrary. But the line is where the eye actually rests, and any ruler that wants to guide the eye must know where each line begins and ends.

Body page 6

Typography carries meaning. A heading announces; a paragraph explains; a short line interrupts. A reader that cannot tell these apart is only pretending to read. This fixture checks that the line index treats each of them correctly.

Consider the line as the unit of attention. Page turns are coarse. Paragraphs are arbitrary. But the line is where the eye actually rests, and any ruler that wants to guide the eye must know where each line begins and ends.

The empty page is not a mistake. Real books contain blank leaves before chapters, after dedications, and at the end of signatures. The engine must not crash on them, must not invent lines, and must tell the ruler there is nothing to stand on.

Dialogue

— You said the reader would find every line.

— I said it would try.

"Try" is not a specification.

It is the only honest one.

— Then write a better one.

Fine. A line is a maximal run of text items whose vertical extents overlap.

That is circular.

Only if you do not measure.

Short lines are the hardest case for clustering: items that are far apart horizontally may still belong to one line, while items on adjacent rows must never merge. This page gives the extractor exactly that stress.

(intentionally blank)

Rotated lines

Rotation The next thing I'm going to do is rotate the page.

Last page

A short mixed page: numbers like 12345 and 3.14159, punctuation!!!, quotes "fine", and an em dash — all in one line to test tokenization.

End of fixture.
